

Features

B-Class armchair is specially designed to give more comfortability to the companion in hospitals, clinics and nurse homes.

Some of its main characteristics are:

- Structure:

It has a resistant structure made of stainless steel that confers it high impact resistance and corrosion protection.

The armchair has been designed with soft lines and rounded edges, without sharp edges and cutting surfaces to avoid any problem with cuts and scratches.

- Foams:

All the armchair is made by a polyurethane foam base (25 kg/m³).

The seat that is made of a higher density foam (30 kg/m³), which gives more collapsing resistance and guaranteeing an ergonomic posture.

- Upholstery:

The foams are upholstered with latex-free vin-

yl fabrics, breathable, easy to clean, abrasion resistant, anti-fungus, antibacterial and fireproof M2.

- Backrest:

Ergonomic design backrest with integrated wings. The wingchair helps the user relaxation and to maintain the vertical position to people with stability problems.

80 mm. belts included.

- Transformable:

The armchair can extend by a manual system, easy to use, to transform the armchair into an individual bed.

- Inside space:

Once it is extended, the armchair has, at the foot side, a storing space to keep blankets and sheets. It opens manually.

The inside is also upholstered as the same of the armchair.

- Mobility:

For an easy handling and comfort of the patient, it has four (4) double wheels with 75 mm diameter.

Also, for a greater safety whilst resting, the rear wheels has an independent brake system.

- Armrest:

Integrated armchair, upholstered, wide and straight to improve the user confort and avoid pressure points.

B-Class Armchair
